

THE BEST SCHOOL

TECH PRODUCT MANAGEMENT

Tech Product Management with AI assistance

Build the judgment, discovery, delivery, analytics, technical, and launch skills needed to guide a technology product from opportunity to adoption.

14 weeks full-time | 22 weeks part-time

Remote | Teaching in English | Up to 10 learners

A practical path from context to evidence

Product management chooses which customer and business value to pursue. Project management organizes how a defined initiative is delivered. This course teaches the product decisions around the work while keeping delivery literacy in view.

WHAT YOU WILL BE ABLE TO DO

- 01 Frame an opportunity and make explicit product strategy choices.
- 02 Plan and synthesize customer research without outsourcing judgment to AI.
- 03 Prototype, test, and revise product assumptions using evidence.
- 04 Connect outcomes to roadmaps, backlogs, releases, and team decisions.
- 05 Use product analytics and economic logic to guide investment.
- 06 Collaborate credibly with engineering, data, security, and operations.
- 07 Prepare launches and adoption loops, then communicate a complete product case.

LEARNING MODEL

Live instruction, guided workshops, individual practice, team simulations, invited practitioners, and one continuous capstone.

01

Opportunity, Market and Product Strategy

FT weeks 1-2 | PT weeks 1-3

Turn a broad business opportunity into a focused product direction with explicit assumptions and measures of success.

- Market and competitor analysis
- Customer value and product-market fit
- Product vision and strategic choices
- Outcome trees, KPIs, and OKRs

PRACTICAL OUTPUT

Opportunity brief, product vision, and strategy map.

02

Discovery and User Research

FT weeks 3-4 | PT weeks 4-6

Develop a reliable view of user needs before a team commits to a solution.

- Research planning and recruiting
- Interviews, observation, and surveys
- Jobs to be Done and journey mapping
- Product hypotheses and traceable evidence

PRACTICAL OUTPUT

Research plan, insight repository, journey map, and problem statement.

03

Prototyping and Validation

FT weeks 5-6 | PT weeks 7-9

Test value, usability, and feasibility before expensive delivery choices become difficult to reverse.

- Value propositions and experiment design
- Wireframes and interactive prototypes
- Usability testing and learning criteria
- Risk-based testing and iteration

PRACTICAL OUTPUT

Prototype, validation plan, and evidence-based recommendation.

04

Product Planning and Agile Delivery

FT weeks 7-8 | PT weeks 10-12

Connect product outcomes to a roadmap and backlog that a delivery team can understand and challenge.

- Outcome-based roadmaps
- Backlog structure and prioritization
- User stories and acceptance criteria
- Scrum, Kanban, and product rhythms

PRACTICAL OUTPUT

Outcome roadmap, prioritized backlog, and release hypothesis.

05

Product Analytics and Economics

FT weeks 9-10 | PT weeks 13-15

Use product data and economic logic to decide whether to improve, scale, or stop.

- Metric trees and product signals
- Funnels, cohorts, and experiments
- Business cases and unit economics
- Benefits tracking and decision thresholds

PRACTICAL OUTPUT

Metric tree, analytics specification, and product business case.

06

Technical Product Practice

FT week 11 | PT weeks 16-18

Build enough technical fluency to make credible decisions with engineering, data, and security.

- APIs, systems, and integrations
- Data flows, quality, and ownership
- Security, privacy, and responsible AI
- AI lifecycle and evaluation

PRACTICAL OUTPUT

Technical product brief, data-flow map, and AI evaluation plan.

07

Go-to-Market, Launch and Growth

FT weeks 12-13 | PT weeks 19-20

Prepare the organization and market for adoption rather than only a release date.

- Positioning and target segments
- Launch strategy and readiness
- Adoption and retention loops
- Growth experiments and responsible messaging

PRACTICAL OUTPUT

Go-to-market plan, launch checklist, and adoption dashboard.

08

Product Leadership and Final Case

FT week 14 | PT weeks 21-22

Lead product decisions across boundaries and present a defensible end-to-end product case.

- Leadership without authority
- Product reviews and decision forums
- Negotiation and executive communication
- Portfolio case and career transfer

PRACTICAL OUTPUT

Final product case, executive review, and portfolio story.

One connected case, built across the course

Design a credible AI-assisted B2B workflow product. Build the opportunity brief, research evidence, prototype, roadmap, metrics, technical brief, launch plan, and executive product case as one connected portfolio artifact.

PORTFOLIO EVIDENCE

- 01 Opportunity brief, product vision, and strategy map.
- 02 Research plan, insight repository, journey map, and problem statement.
- 03 Prototype, validation plan, and evidence-based recommendation.
- 04 Outcome roadmap, prioritized backlog, and release hypothesis.
- 05 Metric tree, analytics specification, and product business case.
- 06 Technical product brief, data-flow map, and AI evaluation plan.
- 07 Go-to-market plan, launch checklist, and adoption dashboard.
- 08 Final product case, executive review, and portfolio story.

CAREER DIRECTIONS

Associate Product Manager

Product Manager

Technical Product Manager

Product Operations

Product Owner in a product organization

Choose a learning rhythm

The content and capstone are shared across both tracks. Only pacing and weekly learning rhythm differ. All dates are provisional.

18 Jan 2027 - Full-time - 14 weeks

Remote | English | Up to 10 learners

15 Feb 2027 - Part-time - 22 weeks

Remote | English | Up to 10 learners

12 Apr 2027 - Full-time - 14 weeks

Remote | English | Up to 10 learners

IMPORTANT NOTES

- Exact live-session times are confirmed before each cohort.
- AI tools are used as assistants. Evidence, privacy, security, and human accountability remain part of every decision.
- The Best School certificate confirms completion of this curriculum and its practical requirements. It is not an external professional credential.
- Course content may be updated to reflect changing practice while the published learning outcomes remain stable.
